Ashiqur Rahaman

Full-stack Developer (React, React Native, Node.js, NestJS, TypeScript) with experience building scalable applications, real-time systems, and automation tools. Worked on chat systems, inventory platforms, and developer tools used by teams daily. Strong focus on clean architecture, performance, and shipping features fast.

EDUCATION

Masai School, Bengaluru
Full Stack Web Development
Nov 2022 - Nov 2023
At Masai School, I gained hands-on experience in learning both frontend and backend technologies, which helped me to build web applications anddive into the exciting world of coding.

Malda Model, West Bengal
Higher Secondary
Apr 2017 - Apr 2019
Where I developed a strong foundation in academics.

SKILLS

BACKEND

- Node.js, NestJS, Express.js, TypeScript
- MongoDB, SQL, Redis
- REST APIs, Authentication, Queues

FRONTEND

- React, Next.js, React Native
- Zustand, React Query, Tailwind

DEVOPS & TOOLS

- Docker, AWS
- GitHub Actions, Atlas Triggers
- Google Apps Script, Zoho Deluge

AI & AUTOMATION

- OpenAI API, Claude
- Phantom (Internal AI Model)
- Cursor, CodeRabbit, Bugbot

CERTIFICATES

- Generative AI By Microsoft
- Zoom Marathon

LANGUAGES

- **English**
- **Hindi**
- **Bengali**

PROFESSIONAL EXPERIENCE

Garaaz | Software Developer *(Oct 2024 - present - Jaipur, Rajasthan)*

- Architected and automated the complete Order-to-Delivery pipeline using Phantom AI, supplier discovery, invoice generation, and logistics orchestration to minimize operational latency.
- Owned the Garage Management System end-to-end,translating business requirements into production systems with AWS infrastructure (S3, CloudFront, Route53, CI/CD).
- Engineered a weighted supplier allocation model $S(x)=\Sigma(w_i f_i)$ based on proximity and fulfillment history to optimize order matching.
- Extracted reusable modules into internal NPM packages to enforce the DRY principle and accelerate development across multiple services.
- Improved customer experience by owning mobile UI revamps, launching AI-powered Speak & Buy, and introducing motion-driven UX enhancements.
- Established an additional revenue stream through AdMob monetization by independently owning its integration into the customer mobile app.

Persist Ventures | Full Stack Developer *(Aug 2024 - Sep 2024)*

- Built the complete MVP end-to-end using MERN and AWS, owning architecture, backend services, deployment pipelines, and production releases while enabling rapid iteration cycles.
- Engineered creator intelligence pipelines aggregating data from Instagram, Facebook, and external sources through distributed IP proxy routing to mitigate rate limiting and maximize extraction reliability.

KEY PROJECTS

Apnabook— Second-hand Book Marketplace

Tech Stack: React Native, Next.js, NestJS, TypeScript, MongoDB, AWS

- Built and launched a cross-platform marketplace serving 1,000+ real users with 500+ active listings.
- Designed a recommendation engine using $R(u,b)=\alpha S+\beta L+\gamma V+\delta P$ to rank books based on search affinity, location, popularity, and freshness.
- Built secure end-to-end communication using RSA + AES encryption while implementing optimized caching and query strategies to support low-latency interactions between buyers and sellers.
- Solved media scalability using distributed cloud storage with automated image compression and optimized delivery pipelines.
- Developed advanced search, ranking heuristics, and location-aware filtering to improve discoverability and retention.

ACHIEVEMENTS

- Founded recurring **Lunch & Learn engineering sessions** that drove the adoption of AI-assisted development tools and modern workflows, introducing technologies such as Cursor, CodeRabbit, Typesense, Twilio AI, Retool, and other productivity systems across the team.
- Established a **leaderboard-driven performance system**, significantly improving team productivity and engagement by motivating members to consistently strive for top positions.
